BACKGROUND

According to the Right to Fair Compensation and Transparency in Land Acquisition, Rehabilitation and Resettlement (RFCTLARR) Act, 2013, it is mandatory to conduct a Social Impact Assessment (SIA) and prepare a Social Impact Management Plan (SMP) for acquisition of land by government for its own use, hold and control or by public-private partnership or by private acquisition for public purposes.

The overall objective of the Act is to make the land acquisition process participatory, humane, informed and transparent. The Act also stipulates that an SIA study for land acquisition shall demonstrate or justify the following:

- a) That the land to be acquired serves a public purpose¹
- b) That the extent of the land to be acquired for public purpose is the absolute bare minimum²
- c) Whether land acquisition at the alternative place has been considered and not found feasible³
- d) Whether overall potential benefits outweigh the social impacts and assessment costs⁴
- e) Inventory of movable and immovable properties likely to be impacted⁵
- f) Number of affected families and number of families likely to be displaced⁶

The role of the SIA is as an instrument that helps assess and determine the implications of land acquisition on the affected community and people. SIA minimizes the risks involved in displacement, rehabilitation, compensation and resettlement. It also guides the land acquiring agency to plan in an informal manner, thus saving cost, and in timely completion of the projects, therefore reducing the risks involved in delays.

OBJECTIVES OF PROPOSED SIA STRUCTURE

The objectives of the SIA structure are:

- a) What should the SIA report contain?
- b) What are the areas that need to be covered and discussed?
- c) How can the SIA report be made concise, focused and comprehensive?

The generic SIA structure will keep the assessment process brief and focused, and avoid creating either a voluminous or a data-deficient report. The proposed structure provides the benchmark for data collection and limits the possibility of inefficiency in SIA reporting. It also helps the state's SIA unit decide whether the SIA report has been compiled after meeting all the requirements or not.
